

Clean Motion wants to optimize cargo transport in cities.

The transportation of goods in cities is steadily increasing around the world, largely due to increased e-commerce. The electric vehicle company Clean Motion AB is now launching Zbee Cargo, which is a new Zbee version that is customized for connected city logistics. The vehicle will be displayed on HANNOVER MESSE, 24-28 April. Sales start in May.

Most major cities are struggling with serious congestion problems and are trying to find solutions to limit the traffic and, in particular, heavy truck traffic in the city centers. This, together with increasing demand for freight transport, creates the need for smaller and smoother vehicles to solve the last mile distribution of goods.

With the launch of Zbee Cargo, Clean Motion now offers an energy-efficient electric vehicle, without emissions, which can be an important last link in a modern and sustainable logistics system.

Zbee Cargo will be a unique product in the segment, since it will be fully connected, in addition to low environmental impact, through the newly launched ZbeeConnect service. - "We will build a variety of services that will be based on ZbeeConnect. The first thing we will offer is a system for fleet management that will enable efficient route planning and vehicle status. " Says Göran Folkesson, CEO at Clean Motion.

There will be two versions of the vehicle, where Zbee Cargo is a pick-up while Cargo + is offered as a van with a lockable cargo space. - "We see a broad potential customer group from property managers and craftsmen to major transport companies, but it can also serve for food distribution that has grown significantly lately. Says Christoffer Sveder, Sales and Marketing at Clean Motion.

During HANNOVER MESSE Energy in Germany that takes place 24-28 April, Zbee Cargo will be shown in the Swedish pavillion, Hall 13, stand B20. The fair is the world's leader in integrated energy systems and sustainable mobility with over 1,200 exhibitors and nearly 100,000 international visitors. The fair is the only one where the entire value chain from energy production, transmission, storage, smart grid, distribution and digital grid management is presented. More information about the fair can be found at www.hannovermesse.de

Zbee Cargo and Cargo + will initially be launched for the European market but see a great interest in the product also in India where the number of e-commerce consumers is expected to increase by 45% from 69 million to 100 million only in 2017.

Sweden, Lerum, 2017-04-20
