

Clean Motion Launches EVIG – Solar Delivery Vehicle

Today marks the day of the official launch of Clean Motion's electric solar delivery vehicle, EVIG. From today it will be possible to order the vehicle using Clean Motion's own fleet configurator on the website with delivery Q1 2023. The company also revealed the new groundbreaking fleet calculator making it possible to calculate both cost and emissions from the fleet and compare it with conventional EVs.

Today Clean Motion reveal the final design and opened for orders.

EVIG is the answer to the critical need for electric delivery vehicles for cities. It is optimised for last-mile deliveries in urban environments, able to carry anything from pallets and packages to post and food. For things that need to be moved in cities, with minimal impact.

Carefully developed based on market needs. In Europe there are over 16 million LCVs operating in cities, mostly running on fossil fuels. With the new vehicle EVIG, Clean Motion tends to set a new standard for city delivery and urban utility vehicles.

EVIG takes energy efficiency to a new level by having the lightest vehicle weight to cargo volume on the market.

Key features:

- 2.5 cubic meter cargo space for maximised utilisation
- 2.5 square meter solar roof for minimal dependence on charging infrastructure
- Low weight for optimised energy efficiency and long range
- Battery range up to 200km

Prices will start at 10.900 EUR with deliveries coming in Q1 2023.

From today EVIG can be configured and ordered at www.cleanmotion.se/order.

The company also released their new fleet calculator where customers can compare and calculate costs and emissions of their fleet and compare it with conventional electric vehicles.
